-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Detailed Action**

1.) The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2.) Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Hagiwara et al. (5,283,419). The patent to Hagiwara et al. (5,283,419) discloses a welding method and a welding power supply with the features claimed. In regard to claim 1: note that TWO consecutive periods labeled “TDC” in Hagiwara et al. (5,283,419) constitute the claimed “DC current portion”; the intermediate period between these two TDC periods, labeled “TAC” in Hagiwara et al. (5,283,419) constitutes the claimed “at least one current pulse of polarity opposite to the polarity of the DC current”. In regard to claim 3, the same is broad enough to read on the waveform of Hagiwara et al. (5,283,419). At least one of the pulses in a period TAC will have multiple and different spacings from respective multiple different other pulse groups. In regard to claim 4, see figure 7 of Hagiwara et al. (5,283,419) and note: the DC power supply at 5; the first and second semiconductor switching devices at 1 and 2; and the control means at 10-13 as claimed.

3.) Claim 7 is objected to for depending from rejected claims, but would be given favorable consideration if recast in independent form to include all of the limitations of the parent claims. None of the prior art of record teaches or suggests the power supply apparatus set

forth in the claim, particularly a power supply with the limitations directed to the first and second reactors combined with the other claim elements.

4.) The Japanese document no. JP62-61779A is cited to show a prior art welding method wherein periods of AC arc current alternate with periods of DC arc current.

Any inquiry concerning this communication should be directed to Clifford C Shaw at telephone number 571-272-1182. The examiner can normally be reached on Monday through Friday of the first week of the pay period and on Tuesday through Friday of the second week of the pay period.
